

# Detailed Lab Results

---

Patient: 19740                      Patient: Joker                      Sex: Male                      Age: 6 Yrs. 2 Mos.  
Client: 3204 Laura Dederling      Species: Canine                      Breed: Retriever, Labrador      Weight: 0.00 pounds

---

Lab ID: ANTECH\_E      Antech Diagnostics (East)

Template: Immunology

Staff: Dr. Kenneth W. Leal, D.V.M.

Status: Posted

Req ID: 19740 - Wednesday                      2/1/2017 00:31:35

---

Test	Results	Reference Range	Low	Normal	High
BRUCELLA	Negative				

Lab Comments: Ascن: NYAE02438761 Profile: Brucella Canis Screen (Non-Export)

## BRUCELLA:

--Interpretation of IFA screening test results for Brucella canis--

A negative result usually means there is no infection with Brucella canis, although false negatives may occur in the first 8-12 weeks post infection. Dogs that have been exposed in the previous 12 weeks should be retested.

A positive result may be a false positive or may be due to Brucella canis infection. Confirmatory testing (AGID) is recommended. If you wish to confirm a positive result please contact customer service and ask to add test S16131.
